

Satyroi

## ABOUT US

The Cooperative Satyroi was born in 2011, in Reggio Calabria province, in the heart of the Area Greca, a cultural district protected by UNESCO with historical origins in the Magna Graecia. The Cooperative, sponsored by AIAB (Italian Association for Organic Agriculture) in Calabria, in addition to being an organic farming company is a social organization. Its actions are strongly oriented towards inclusion and sustainable development of rural areas by promoting models of socio-economic and cultural development to retrain and promote the cultural and environmental heritage, responsible consumption, ethical work in agriculture, through the multifunctionality of organic agriculture as the guarantor of the integrated development and participatory.

Promotes food products, on the national and international markets.

Coordination of small and medium-sized enterprises by stimulating forms of business development and sustainable production strategies.

Research projects coordination and implementation, promotion and rural development activities, conservation of biodiversity and territorial identities, mediator between public and private entities.

Promotional activities of rural development, forestry and environmentally friendly agriculture.

Protects and enhances the historical and cultural identity of a specific territory, protection of biodiversity and the agro foods excellence through "Bio Distretti" (Organic District).

Develop relationships, activities and initiatives with consumers and operators in the field of production and agro-biological transformation.

Actions to relationship between producer and consumer; promoting solidarity purchasing groups (GAS), organized groups of request and supply (GODO) and wine tourism activities

Promotes, organizes, manages, educational activities and awareness campaigns by educational activities and training related to organic farming and biodiversity.

Food culture programs, to better promote knowledge of the historical roots, the production processes and forms of public catering.

Cultural events, and publishing products of popularizing education and science, connected to the world and culture of rural territories.

## AREA GRECANICA

Satyroi is located in the most southern point of the European continent, more precisely in a part of the Reggio Calabria province called Area Grecanica. Here still live small communities who speak an ancient language of Greek origin. They are the Greeks of Calabria, who migrated from Greece to the Ionian Calabrian coast between the VIII° and VI° century B.C. to seek and cultivate new lands. Since

then, the Hellenic identity survived the Roman civilization, grew over time even after the subsequent arrival of the Byzantines, which allowed new relationships between Calabria and territories of the East. During IX century the *grecofone* community, confined and isolated in the Aspromonte Mountains escaped the threat of the Saracens and Turks. The Hellenism of Calabria developed in this area so rich in impenetrable mountains and along the rocky bed of the rivers called "fiumare" which were the only means of access and communication also with the neighboring city of Reggio. The relationship between the Greeks and their Calabrian

● paesi in cui si parla ancora la lingua Greco Calabro

● paesi di tradizione grecofona

mountains allowed to shape the habits and lifestyle of shepherds and farmers who dedicated their lives to the land. Rurality and the identity of the Hellenistic Area still gives suggestions of her past greek also and especially through its food and wine.

## OUR SERVICES

Our initiatives are aimed to promote and facilitate the market entry of all the Italian organic products, with a focus on production and producers that show major difficulties to place in the national and international market. Small farming that have adopted the system of organic agriculture as a model in its production activities and in the preservation of biodiversity. Cooperative Satyroi has succeeded in creating a network of small and medium-sized farms, with

the target of stimulating new forms of business. Satyroi aimed at the development of the national organic production and the growth of the entire sector too. In this regard Satyroi has qualified logistics partners for every need and type of distribution in entire national territory and outside of Italy. It also carries out programs for the protection and enhancement of rural resources , identifying cultural connections of every individual territory , seen as a added value of organic products. Satyroi organize cultural events and editorial informative products, provides services and assistance in the editing of development projects , acting as a mediator between the public and private entities.

## ORGANIC FARMING

### What about organic farming

Organic farming is a agricultural method regulated by EC legislation with a first regulation, Regulation EEC 2092/91, and then EC Regulation 834/07 and 889/08 and Italian DM 18354/09 regulation. "Organic farming" a method of cultivation and breeding refers. Natural substances in nature present, excluding the use of synthetic chemical substances (fertilizers, herbicides, insecticides) only used. Organic farming means to develop a model of production that avoids natural resources over-exploitation, in particular of the soil, water and air, instead of using these resources as development model that can last over time.

Organic farmers use organic material, and appropriate agricultural techniques to preserve the natural fertility of soil, excluding intensive methods at the same time. About farming systems, the animals welfare is the goal. They feed on grass and organic feed with no antibiotics, hormones or other substances that artificially stimulate growth and milk production. In addition, animals must be reared in open spaces to move around and graze freely.

### The crops

Synthetic chemicals ,fertilizers, herbicides, fungicides, insecticides, pesticides in organic farming do not use. Crop protection is made through, selecting species resistant to disease and intervening with appropriate cultivation techniques, such as, for example:

Crop rotation: not consecutively growing the same plant on the same land, on the one hand hinders the acclimate of the parasites and the other are exploited in a more rational and less intensive soil nutrients;

Hedges and trees planting, as well as creating the landscape, give hospitality to the natural predators of pests and act as a physical barrier to possible external pollution;

Intercropping: growing plants in parallel dislike the other one for the other parasite;

Organic farming use natural fertilizers such as manure and organic composted substances (mowing, etc.). than green manure, associations of different plant varieties that are sown at the same time, such as clover or mustard.

Natural substances plants for crops protection: animals or minerals extracted from plants, beneficial predatory insects, natural mineral or rock flour to correct structure and chemical properties of the soil and to protect the crops from the cryptogams.

Organic cultivation techniques made the biological balance in farms; however, it becomes necessary, the farmer may appeal only to the substances of natural origin and detailed expressly authorized by the Rules Committee (with the criterion of "positive list"so-called) to protection of crops from pests and other adversities.

## Animal farms

Even organic animals farm following regulatory criteria defined by the European Union through the EC Regulation 1804/99 and Italian DM n.91436 on August 4, 2000 Regulation.

*General Rules* Animals must be fed according to their needs with plant products with the organic production method, preferably grown on the same farm or in the district in which the company falls. Animals breeding with organic methods is closely tied to the land. The number of livestock is reared in close relationship with the available surface area. Farming systems adopted must meet the physiological and ethological needs of the animals. Therefore they must allow the animals bred to express their natural behavior and should guarantee him adequate living systems. Are prohibited embryo transfer and hormones to control ovulation except in the case of veterinary treatment. Genetic manipulation is prohibited. Transport of livestock must be

as short as possible and carried out so as to limit the stress suffered by the animals. No brutality during the loading and unloading of animals. No sedatives during the journey. During slaughter or killing time the treatment of animals must limit stress and, at the same time, offer the necessary guarantees with respect to the identification and separation of organic animals from the conventional ones.

### ***Breeds choice***

It's better to breed indigenous breeds that are well adapted to local environmental conditions, disease resistant and suitable for outdoor housing.

### ***Stables and hygiene standards***

Breeding conditions must take into account the innate animals behavior. Specially, breeding structures must be healthy, properly sized for the load of livestock and should allow isolation of the leaders who need medical care. They also need to be sure enough free space available to the animals. For each category of animal species and the EC Regulation 1804/99 defines the minimum space that should be available both indoors (in stables, shelters) and outdoor (paddock and more).

### ***Feeding***

Balanced diets should be according to the animals nutritional requirements. The 100% of the feed should be from organic crop. However, to use non-organic foods up to a maximum of 10% for ruminants and 20% for other animals is permitted just in particular cases. That's from 24 August 2002. Supply prohibited in organic food rations: growth stimulants or appetite stimulants synthetic; preservatives and dyes; urea; animals by-products (eg abattoir waste or fish meal) to ruminants and monogastric herbivores, except for milk and milk products; droppings or other animal waste; foods subjected to treatments with solvents (eg soya meal or other oilseeds) or with added chemicals in general; genetically modified organisms; synthetic vitamins.

## OUR PRODUCTS

Different varieties of citrus , fruit and vegetables with a special attention to the typical present on the territory of Calabria as clementine and bergamot, cultivated exclusively along a strip of 100 km in the Ionian province of Reggio Calabria, where is a production of excellence , recognized by the DOP . Of this very rare prestigious Calabrian citrus , the Cooperative sells the essence and the fruit , excellent allied health. The other food items are: Cheese from Aspromontana goat's milk, a native species, extra virgin olive oil, different kind of wine, processed fruits and vegetables, Calabrian black pork Sauasages , honey, liquorice and its derivatives. ## PARTNER

Satyroi is part of the MEDEA Consortium. Which is non-profit organization to promote, protect, organize and exploit organic agro-food products of all associated farms.

L'AIAB Calabria is a non-profit organization of social utility. the association promote and protect organic agriculture in entire Calabrian territory. It combines organic farms, companies processing, packaging and marketing organic products, skilled technicians and environmental associations of consumers and voluntary civil too.

Satyroi is a business partner of Arcoiris Ltd for which Satyroi sell organic and biodynamic seeds throughout the Calabria Region.

The products we promote are obtained with strictly organic method, and guaranteed by the disciplinary quality expressed under the brand "GaranziaAIAB " 100% Italian and 100 % organic and " GAF " in addition to the guarantees of brand " Qualità Lavoro " : a voluntary

system of additional certification for organic farms that focuses on respect for workers' rights and an ethical way of farming that respects the environment and the consumer. The organic certification guarantees that our products are:

- made only with organic raw materials
- not-genetically modified (OGM FREE)
- suitable for a gluten-free diet
- without pesticides, herbicides, chemical fertilizers, antibiotics and phytohormones
- leggs come from hens fed with organic feeds at Km 0

raw materials are produced with natural techniques, respecting the ecological balance, to protect our health.
